

Virginia eGov Private Development Cloud

the benefits of the cloud

the security of a private site

About the Cloud

Our Virginia eGov Private Development Cloud gives you all of the benefits of cloud computing with all the security of private, dedicated servers. Using a cloud-based hosting system allows for a flexible and cost effective way to deploy development servers instantly and on demand without all of the time and expense associated with hardware procurement.

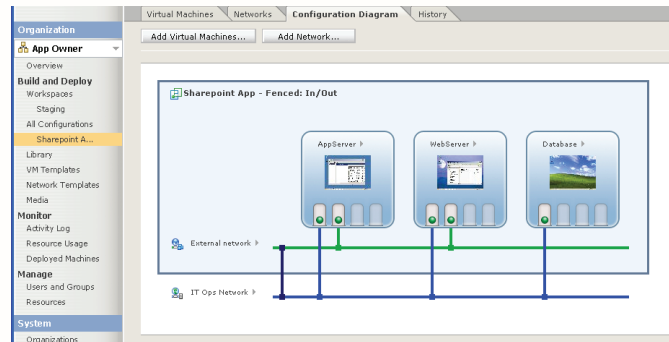

Use your self-serve portal to fire up an instance of a virtual machine and begin development testing immediately. When testing has been completed, simply shut down the virtual machine. It's simple, it's safe and with self-service, it's there when you need it.

We keep you safe and secure by allowing only Commonwealth of Virginia eGov customers to participate in this program.

Physical vs. Cloud

Need short-term development servers? In the physical world, you need to secure the funding, procure the equipment, await delivery and then begin the project. That's time and capital wasted!

Get beyond buying hardware. Simply login to your portal, spin up a couple servers and get started. Use them for as long as you need — hours, days, months — and then shut them off. Only pay for what you use!

Benefits

- Instantly available
- Flexible — pay only for what you use
- No capital expenditures
- Private cloud security
- AISN manages hardware & networking
- You maintain total control over usage

Capabilities

- Portal into your piece of the cloud
- Create a library of VMs for quick testing
- Maintain a controlled test environment
- Spin up VMs with precise capabilities (CPU, RAM, Storage)

Pricing

CPU per Ghz Hour	0.0200
GB RAM per Hour	0.0990
Disk Storage per TB Hour	0.0780
Internet Bandwidth per GB - In/Out	0.1500

Hosting pioneer AIS Network is a Tier III/Tier IV provider of fully managed cloud solutions for the Commonwealth of Virginia.
